## Summary

2 years' experience working as a frontend developer. Taking on assignments ranging from bug fix/enhancements to adding features to custom UI library. Persistent, confident and adept at working with cross functional teams. Love to take on challenging assignments and hone my skills in the process.

## Experience

**Program Analyst**

Cognizant

Jun 2019 – Present

## Project

### Enterprise delivery platform

EDP is a workflow automation tool, built to accelerate enterprise deployments. It helps the deployment personnel to build, deploy and verify custom designs based on the customer need.

### Role: Frontend developer

- \* Developed UI elements for several features including the planning tool.
- \* Developed custom UI library which is used to show dynamic forms based on custom logics given by the user.

### Technologies used:

- \* Angular 8+, HTML, SCSS for component development.
- \* Jasmine and karma for unit testing the application.
- \* VM Clarity for material design.
- \* JavaScript libraries like Lodash and RxJS.
- \* JIRA to implement and track Kanban agile methodology.
- \* Jenkins to deploy changes
